

tailwindcss

v3.4

DYNAMIC VIEWPORT UNITS

Class	CSS
<code>`h-svh`</code>	<code>`height: 100svh`</code>
<code>`h-lvh`</code>	<code>`height: 100lvh`</code>
<code>`h-dvh`</code>	<code>`height: 100dvh`</code>
<code>`min-h-svh`</code>	<code>`min-height: 100svh`</code>
<code>`min-h-lvh`</code>	<code>`min-height: 100lvh`</code>
<code>`min-h-dvh`</code>	<code>`min-height: 100dvh`</code>
<code>`max-h-svh`</code>	<code>`max-height: 100svh`</code>
<code>`max-h-lvh`</code>	<code>`max-height: 100lvh`</code>
<code>`max-h-dvh`</code>	<code>`max-height: 100dvh`</code>

NEW :HAS() VARIANT

The :has() pseudo-class is the most powerful thing that's been added to CSS since flexbox. For the first time ever, you can style an element based on its children, not just based on its parents.

Payment method

 Google Pay

 Apple Pay

 Credit Card

```
<label class="has-[:checked]:ring-indigo-500 has-[:checked]:text-indigo-900 has-[:checked]:text-indigo-900">
  <svg fill="currentColor">
    <!-- ... -->
  </svg>
  Google Pay
  <input type="radio" class="accent-indigo-500 ..." />
</label>
```

STYLE CHILDREN WITH THE * VARIANT

Generally, I would recommend just styling the children directly, but this can be useful when you do not control those elements.

NEW SIZE-* UTILITIES

In Tailwind CSS v3.4, the team finally added a new **size-*** utility that sets width and height at the same time.

HTML

```
<div>
- <img class="h-10 w-10" ...>
- <img class="h-12 w-12" ...>
- <img class="h-14 w-14" ...>
+ <img class="size-10" ...>
+ <img class="size-12" ...>
+ <img class="size-14" ...>
</div>
```

BALANCED HEADLINES WITH TEXT-WRAP UTILITIES

How much time have you spent fiddling with max-width or inserting responsive line breaks to try and make those little section headings wrap nicely on your landing pages? Well now you can do it with `text-wrap: balance`.

Beloved Manhattan soup stand closes

New Yorkers are facing the winter chill with less warmth this year as the city's most revered soup stand unexpectedly shuts, following a series of events that have left the community puzzled.

```
<article>
  <h3 class="text-balance ...">Beloved Manhattan soup stand closes</h3>
  <p>New Yorkers are facing the winter chill...</p>
</article>
```

text-pretty which tries to avoid orphaned words at the end of paragraphs using **text-wrap: pretty**.

Beloved Manhattan soup stand closes

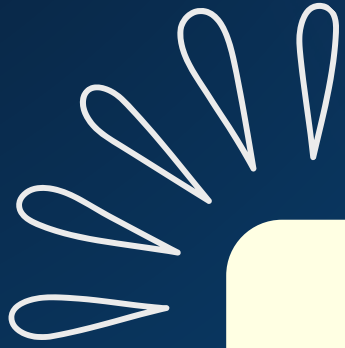

New Yorkers are facing the winter chill with less warmth this year as the city's most revered soup stand unexpectedly shuts, following a series of events that have left the community puzzled.

```
<article class="text-pretty ...">  
  <h3>Beloved Manhattan soup stand closes</h3>  
  <p>New Yorkers are facing the winter chill...</p>  
</article>
```
