Array Method

Map

JS

Part #4

- The `map()` creates a new array from calling a function for every array element.
- The `map()` does not execute the function for empty elements.
- The `map()` does not change the original array.

`[●●●].map(● = ●) = [●●●]`

index.html × script.js × style.css ×

```
1  const numbers = [1, 2, 3, 4];
2  // Create new array from calling every element array numbers
3  const newNumbers = numbers.map(num => num * 2)
4  console.log(newNumbers)
5
```

Web View × Console ×

▶ (4) [2, 4, 6, 8]
