#_ Important [JavaScript Built-in Methods] {CheatSheet}

1. Array Methods

```
• forEach(): array.forEach(element => console.log(element));
• map(): const squares = array.map(x => x * x);
• filter(): const evens = array.filter(x => x % 2 === 0);
• reduce(): const sum = array.reduce((acc, curr) => acc + curr, 0);
• find(): const found = array.find(x => x > 10);
• indexOf(): const index = array.indexOf(item);
push(): array.push(item);
• pop(): const lastItem = array.pop();
• shift(): const firstItem = array.shift();
unshift(): array.unshift(item);
• splice(): array.splice(startIndex, deleteCount, item);
• slice(): const sliced = array.slice(startIndex, endIndex);
concat(): const mergedArray = array1.concat(array2);
• join(): const str = array.join(', ');
• includes(): const hasItem = array.includes(item);
• some(): const hasNegative = array.some(x => x < 0);
• every(): const allPositive = array.every(x => x > 0);
• sort(): array.sort((a, b) => a - b);
• reverse(): array.reverse();
```

2. String Methods

```
charAt(): const char = str.charAt(index);
concat(): const combinedStr = str1.concat(str2);
includes(): const hasSubstring = str.includes(substring);
indexOf(): const index = str.indexOf(substring);
lastIndexOf(): const lastIndex = str.lastIndexOf(substring);
match(): const matches = str.match(regex);
repeat(): const repeatedStr = str.repeat(times);
replace(): const replacedStr = str.replace(regex, newSubstr);
search(): const index = str.search(regex);
slice(): const slicedStr = str.slice(startIndex, endIndex);
```

```
• split(): const tokens = str.split(delimiter);
• substring(): const substring = str.substring(startIndex, endIndex);
• toLowerCase(): const lowerStr = str.toLowerCase();
• toUpperCase(): const upperStr = str.toUpperCase();
• trim(): const trimmedStr = str.trim();
```

3. Object Methods

```
• Object.keys(): const keys = Object.keys(obj);
Object.values(): const values = Object.values(obj);
• Object.entries(): const entries = Object.entries(obj);
Object.assign(): const newObj = Object.assign({}, obj1, obj2);
• Object.freeze(): const frozenObj = Object.freeze(obj);
• Object.isFrozen(): const isFrozen = Object.isFrozen(obj);

    Object.seal(): const sealedObj = Object.seal(obj);

    Object.isSealed(): const isSealed = Object.isSealed(obj);

Object.create(): const newObj = Object.create(prototypeObj);

    Object.hasOwnProperty(): const hasProp = obj.hasOwnProperty(prop);
```

4. Number Methods

```
    Number.parseInt(): const intVal = Number.parseInt(string, radix);

    Number.parseFloat(): const floatVal = Number.parseFloat(string);

    Number.isNaN(): const isNaN = Number.isNaN(value);

• Number.isFinite(): const isFinite = Number.isFinite(value);

    Number.isInteger(): const isInteger = Number.isInteger(value);

  Number.toFixed(): const fixedStr = num.toFixed(digits);
```

5. Math Functions

```
• Math.abs(): const absolute = Math.abs(num);
• Math.ceil(): const roundedUp = Math.ceil(num);
• Math.floor(): const roundedDown = Math.floor(num);
Math.round(): const rounded = Math.round(num);
Math.max(): const max = Math.max(num1, num2, ...);
• Math.min(): const min = Math.min(num1, num2, ...);

    Mαth.pow(): const power = Math.pow(base, exponent);
```

- Math.sqrt(): const sqrt = Math.sqrt(num);
- Math.random(): const randomNum = Math.random();

6. Global Functions

- parseInt(): const intVal = parseInt(string, radix);
- parseFloat(): const floatVal = parseFloat(string);
- isNaN(): const isNaN = isNaN(value);
- isFinite(): const isFinite = isFinite(value);

7. Date Methods

- Date.now(): const now = Date.now();
- Date.parse(): const timestamp = Date.parse(dateString);
- new Date(): const date = new Date(year, month, day, ...);

8. Regular Expression Methods

- RegExp.test(): const matchesPattern = regex.test(string);
- RegExp.exec(): const match = regex.exec(string);

9. JSON Methods

- JSON.stringify(): const jsonString = JSON.stringify(obj);
- **JSON.parse()**: const obj = JSON.parse(jsonString);

10. Web APIs

- setTimeout(): const timeoutId = setTimeout(() => { /* code */ }, delay);
- clearTimeout(): clearTimeout(timeoutId);
- setInterval(): const intervalId = setInterval(() => { /* code */ }, delay);
- clearInterval(): clearInterval(intervalId);

11. Promises and Asynchronous Programming

• Promise.then(): promise.then(value => { /* code */ });

```
• Promise.catch(): promise.catch(error => { /* code */ });
```

- Promise.finally(): promise.finally(() => { /* code */ });
- Promise.αll(): Promise.all([promise1, promise2]).then(values => { /* code */ }):
- Promise.race(): Promise.race([promise1, promise2]).then(value => { /* code */ });
- async function: async function fetchData() { const data = await fetch(url); }

12. Console Methods

```
• console.log(): console.log('message', obj);
```

- console.warn(): console.warn('warning message');
- console.error(): console.error('error message');
- console.info(): console.info('info message');
- console.clear(): console.clear();

13. Miscellaneous Methods

- alert(): alert('Alert message');
- confirm(): const confirmed = confirm('Are you sure?');
- prompt(): const userInput = prompt('Enter your name:', 'Default Name');
- encodeURIComponent(): const encoded = encodeURIComponent(uriComponent);
- decodeURIComponent(): const decoded = decodeURIComponent(encodedUriComponent);

14. DOM Manipulation (Web-Specific)

- document.getElementById(): const element = document.getElementById('id');
- document.querySelector(): const element = document.guerySelector('.class');
- document.querySelectorAll(): const elements = document.querySelectorAll('div');
- document.createElement(): const div = document.createElement('div');

- element.appendChild(): parentElement.appendChild(childElement);
- element.innerHTML: element.innerHTML = 'New content';
- element.addEventListener(): element.addEventListener('click', eventHandler);
- element.style: element.style.color = 'blue';
- element.setAttribute(): element.setAttribute('data-custom', 'value');
- element.removeAttribute(): element.removeAttribute('data-custom');

15. Event Handling

- element.onclick: element.onclick = function() { /* code */ };
- element.addEventListener(): element.addEventListener('click', eventHandler);
- **element.removeEventListener()**: element.removeEventListener('click', eventHandler);
- event.preventDefault(): element.addEventListener('click', event =>
 event.preventDefault());

16. BOM (Browser Object Model) Methods

- window.open(): const newWindow = window.open(url);
- window.close(): window.close();
- window.moveTo(): window.moveTo(x, y);
- window.resizeTo(): window.resizeTo(width, height);

17. Web Storage API

- localStorage.setItem(): localStorage.setItem('key', 'value');
- localStorage.getItem(): const value = localStorage.getItem('key');
- sessionStorage.setItem(): sessionStorage.setItem('key', 'value');
- sessionStorage.getItem(): const value =
 sessionStorage.getItem('key');

18. Fetch API and XMLHttpRequest

- fetch(): fetch(url).then(response => response.json());
- MLHttpRequest(): const xhr = new XMLHttpRequest(); xhr.open('GET',
 url); xhr.send();

19. History API

- history.pushState(): history.pushState(stateObj, 'title', 'page2.html');
- history.replaceState(): history.replaceState(stateObj, 'title', 'page3.html');
- history.back(): history.back();

20. WebSockets

• WebSocket: const socket = new WebSocket('ws://example.com');

21. File and FileReader API

- FileReader.readAsDataURL(): const reader = new FileReader();
 reader.readAsDataURL(file);
- FileReader.onload: reader.onload = function() {
 console.log(reader.result); };

22. Geolocation API

• navigator.geolocation.getCurrentPosition():

```
navigator.geolocation.getCurrentPosition(position =>
console.log(position));
```

- navigator.geolocation.watchPosition(): const watchID = navigator.geolocation.watchPosition(position => console.log(position));
- 23. Performance API
 - performance.now(): const start = performance.now();

24. Request Animation Frame

- requestAnimationFrame(): requestAnimationFrame(timestamp => { /*
 animations */ });
- 25. Internationalization

- Intl.DateTimeFormat(): const formatter = new Intl.DateTimeFormat('en-US'); console.log(formatter.format(date));
- Intl.NumberFormat(): const numberFormatter = new Intl.NumberFormat('en-US'); console.log(numberFormatter.format(number));

26. Canvas API

• getContext(): const ctx = canvas.getContext('2d');

27. Drag and Drop API

- ondragstart: element.ondragstart = function(event) { /* code */ };
- ondrop: dropArea.ondrop = function(event) { /* code */ };

28. Mutation Observer API

• MutationObserver(): const observer = new MutationObserver(callback); observer.observe(targetNode, config);

29. Screen API

- screen.width: const screenWidth = screen.width;
- screen.height: const screenHeight = screen.height;

30. Navigator API

- navigator.userAgent: const userAgent = navigator.userAgent;
- navigator.onLine: const isOnline = navigator.onLine;
