FLEXBOX FROGGY

◀ Level 1 of 24 ▾ ▶

Welcome to Flexbox Froggy, a game where you help Froggy and friends by writing CSS code! Guide this frog to the lilypad on the right by using the `justify-content` property, which aligns items horizontally and accepts the following values:

- `flex-start`: Items align to the left side of the container.
- `flex-end`: Items align to the right side of the container.
- `center`: Items align at the center of the container.
- `space-between`: Items display with equal spacing between them.
- `space-around`: Items display with equal spacing around them.

For example, `justify-content: flex-end;` will move the frog to the right.

```
1  #pond {
2    display: flex;
3    
4  }
5
6
7
8
9
10
```

The Flexible Box Layout Model (flexbox) is a layout model desig content. It excels at taking a bunch of items which have differen best layout for those items.

This is the ideal layout model for this sidebar pattern. Flexbox n and content out inline, but where there's not enough space rem onto a new line. Instead of setting rigid dimensions for the brow you can instead provide flexible boundaries to hint how the cont

HTML   CSS   Result

This is an article of content that sits inline with a sidebar. Resize the browser to see how when there's no enough room, the sidebar will stack on to a new line.
